SOLARHOTTY APPOINTS TELLUMAT SOUTH AFRICA AS GLOBAL MANUFACTURER

As the Newcastle, UK firm grows its distributor network, global offices and product range, the deal with Tellumat ensures the availability and quality of supply from a world-class manufacturer.

Newcastle, England & Cape Town, South Africa: Fast-growing renewable energy start-up SolarHotty has signed an MOU with South African electronics leader Tellumat for the global manufacture and supply of the innovative SolarHotty AC/DC Power converter.

“Worldwide electric hot water tanks are a very high consumer of electricity across the world. The SolarHotty allows any homeowner to convert their existing hot water tank to be powered from PV whilst only using grid power as an option, effectively slashing their electricity bill. No other company offers a complete conversion solution like the SolarHotty – cost effective and incredibly simple to install” says SolarHotty MD, Frank Pretorius. “The appointment of Tellumat to manufacture and supply the SolarHotty secures the global availability of the SolarHotty and ensures that customers can be safe in the knowledge that the product helping reduce their electricity bills has been manufactured by a world class manufacturer to stringent international standards”

Shaun Hendricks, Managing Executive of Tellumat’s Strategic Project Group “Tellumat is excited about this opportunity. It speaks to the green energy initiatives that are being followed worldwide while at the same time creating much sought after jobs in the local and international economies. As the SolarHotty product does not impact on existing plumbing, it is easily integrated into current infrastructure, making it an extremely attractive proposition to home owners and businesses alike.”

Frank Pretorius of SolarHotty continues, “The Solarhotty, connected to a single solar panel powering an element is also uniquely suited to humanitarian missions where water needs to be heated to avert waterborne diseases. The upliftment and empowerment of communities and individuals is a key focus for us. Tellumat through their empowerment programs makes for a perfect partner for us in Africa”

The first production units are expected to be available in early 2017.

About the Companies:

SolarHotty Ltd is a start-up technology company focused on facilitating the global conversion of electrically powered hot water tanks to renewable energy. The company has offices in Newcastle UK and representatives in the United States and Australia. www.solarhotty.com

As leaders in electronic technology serving the telecommunications, defence & security, transport and energy industries in South Africa and global markets, Tellumat solves problems in a way that combines more than 50 years of technological innovation and expertise with new ways of doing business. At Tellumat we anticipate trends, identify opportunities and create sustainable business value. Lasting partnerships with customers and global technology partners are testimony to this.

Tellumat is a Level 2 B-BBEE contributor.
